

# The public transport and government telecommunications specialist

# VicTrack is an enterprise established by the Victorian Government to support both public transport and broader government priorities. Telecommunications is one of our three core business areas.

As a licensed telecommunications carrier, we own and operate the second-largest optical fibre network in the state, together with a 24/7 Network Management Centre which is based in Melbourne.

Since inception in 1997, we have successfully delivered projects for public rail and tram operators, other government agencies and departments, and for local councils and the communities they serve. At the same time, we have invested continually in network improvements that

add demonstrable value to project outcomes, spending more than \$72m to introduce next generation technology, expand the reach and capacity of our infrastructure, and broaden our service offering.

Our unique combination of sector insight and infrastructure, coupled with the specific expertise of our engineering and support teams, enables us to bring clarity to complex solutions, offer budget certainty, and mitigate risk at every step of a project's implementation.

## Telecommunications

As a licensed telecommunications provider and with network infrastructure that spans the state, we provide a full suite of telecommunications services to the transport sector. Our networks are the backbone of public transport customer information, myki ticketing, driver communications and other network critical systems such as signalling. We also provide 24-hour network monitoring and planned and emergency repair and maintenance to ensure the highest standards of reliability and safety for the transport system and its users.

## Project Delivery

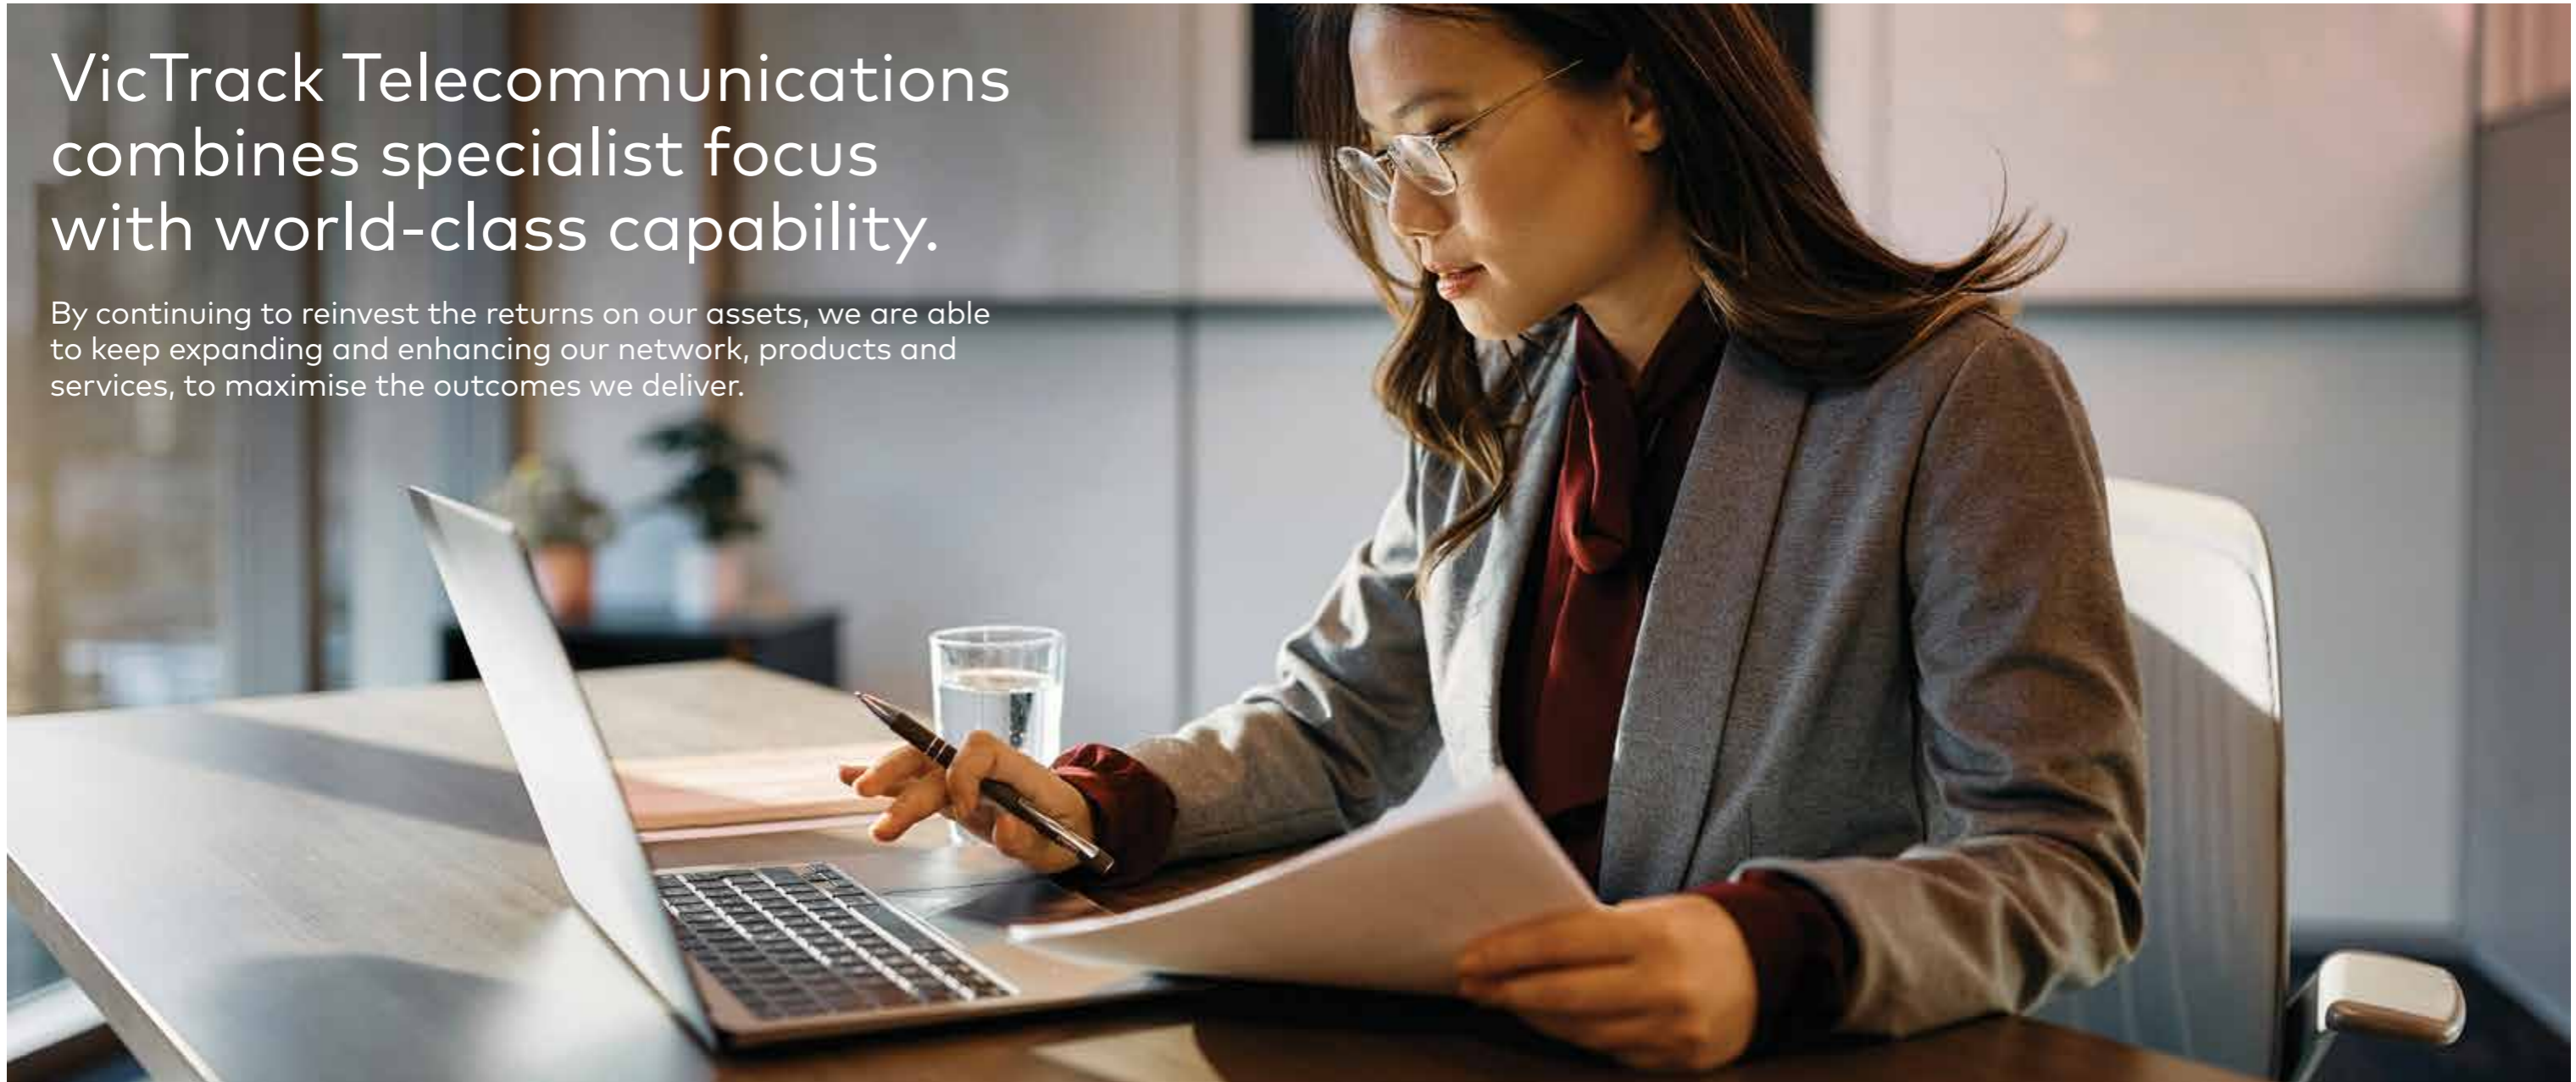

Our Project Delivery Group provides specialised project delivery services supporting critical transport projects for the Victorian Government and transport operators. Our services include project management and project delivery in civil engineering, signalling and telecommunications projects, as well as safety and technical services.

## Property

As owners of Victoria's rail transport land and assets, we work with transport operators and government agencies to ensure they are managed to deliver on the state government's policy objectives. With large quantities of land and associated air rights that are not required for active transport purposes, we work to drive revenues from these assets to enable reinvestment in the transport system. These activities include land sales and acquisitions, property development and commercial leasing.

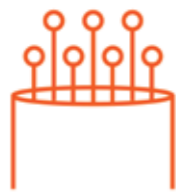

# VicTrack Telecommunications combines specialist focus with world-class capability.

By continuing to reinvest the returns on our assets, we are able to keep expanding and enhancing our network, products and services, to maximise the outcomes we deliver.

## Reliability and availability

VicTrack Telecommunications' purpose-built infrastructure and facilities deliver high-level security, high-speed performance and the confidence of 99.95% network availability.

## Fibre coverage

Spanning more than 3,500 kilometres, our fibre-optic cable network is one of the largest in the state.

## Responsiveness

Our Melbourne based Network Management Centre is staffed round-the-clock, and supported by more than 300 specialist engineers, field technicians and service personnel.

## Data

As a critical infrastructure provider, we deliver carrier grade data solutions over a fully redundant network. From single link connections to comprehensive whole-of-network solutions, we can offer you seamless, reliable, and top-tier data services.

## Delivery

The scale and expertise of VicTrack Telecommunications have enabled us to deliver projects worth more than \$125 million in the past three years alone.

## Simplicity and time efficiency

VicTrack can monitor and manage your network 24x7, 365 days of the year, leaving you to focus on your core business operations.

VicTrack supplies a comprehensive range of telecommunications products and services, to meet the specific needs of your business.

### Internet

Supercharge your business with lightning-fast, reliable and secure internet and unlock your online potential today!

Delivered over VicTrack's reliable, resilient and secure network, our internet service offers fast and direct connectivity to be able to service your needs and enable you to grow your business.

VicTrack internet offers an uncontested experience ensuring that traffic is delivered without delays associated with network congestion.

### Wavelength

Get the speed and performance you need with VicTrack's wavelength service. Our powerful optical wavelength technology provides dedicated, high-speed data connections over the OTN, allowing multiple data streams to be transmitted simultaneously.

VicTrack's transmission network is designed to deliver outstanding performance, capable of handling service speeds of up to 100Gbps. Our wavelength services are perfect for customers who need ultra-high bandwidth for their business data transfer and applications.

### Co-location

With super-fast internet, power, cooling and superior security, VicTrack provides a safe and dependable environment for your equipment.

VicTrack's co-location services boost network reliability and redundancy.

By placing equipment in diverse locations, we ensure service availability during local outages or disasters, providing peace of mind that services will stay operational.

### Dark fibre

With VicTrack dark fibre, you can trust that your communication is lightning fast, safe, and dependable. It's the highly reliable way to keep things connected smoothly and securely.

VicTrack's dedicated fibre links can carry extremely high-speed data transfer rates, often reaching multiple gigabits per second (Gbps), allowing for fast and reliable data transfer.

### Ethernet

Our ethernet services provide flexible bandwidths to support the needs of any organisation. VicTrack's solution is easily scalable to accommodate a large number of sites, bandwidth, and application requirements. With this service, customers can make network changes, such as adding in new sites, without disruption.

### IPWAN

VicTrack provides reliable, secure, and high-speed WAN connectivity. With VicTrack taking care of your WAN, we ensure data travels between your sites using the most efficient routes. This saves businesses large upfront equipment costs and ongoing operational and management costs.

IPWANs can be easily reconfigured to adapt to changing business needs.
