

Keeping Victoria's transport networks connected

Telecommunication services
for the transport industry

Driving smarter, safer transport through connectivity

Today's transport networks rely on far more than tracks and timetables. From live passenger information and ticketing systems to CCTV, signalling, and control centre communications, reliable, high-capacity telecommunications infrastructure is fundamental to efficient and safe operations.

As the owner of Victoria's assets, we are industry experts and uniquely positioned to support the transport industry with dedicated, high-performance infrastructure that enables integration, modernisation, and real-time responsiveness.

End-to-end connectivity solutions

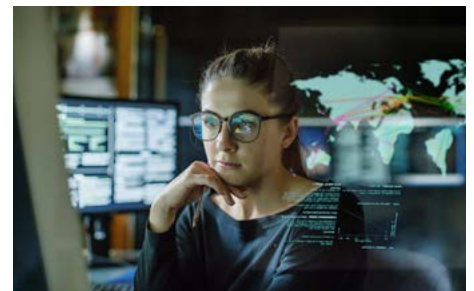

Broad geographic reach

Connectivity to stations, stops, offices and other facilities, enabling full coverage of your operational environment.

Fibre backhaul and core connectivity

Dedicated high-capacity solutions linking operations centres, depots, and key nodes in your network.

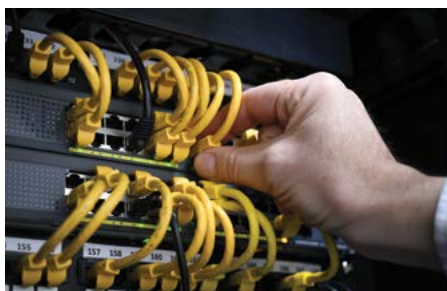

Real-time data services availability

Low-latency, high-reliability ethernet and internet services for control systems and passenger services.

Customised builds and network extensions

Infrastructure solutions tailored to your unique operational footprint, delivered with local knowledge and hands-on project support.

Secure, private networks

Network separation and high security for sensitive transport applications, including automation, real time network data and signalling.

Data centre connectivity

VicTrack Data Centres, Co-location, and connections to all the major commercial data centres in Victoria.

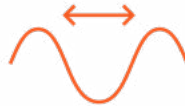

VicTrack supplies a range of telecommunications products and services, to meet the needs of your business

A strategic partner for the transport industry

Join the operators who already rely on VicTrack to keep their networks moving, including Metro Trains, V/Line and Yarra Trams. Whether you run rail, tram, port or bus services, VicTrack delivers reliable, secure and scalable connectivity that supports both daily operations and long-term innovation.

About VicTrack Telecommunications

VicTrack is a licensed telecommunications carrier that owns and operates one of the largest fibre optic networks in Victoria. Our secure, scalable, multi-layered network delivers speeds of up to 100Gbps. Monitored by our Melbourne-based 24/7/365 Network Management Centre, the core network has a target availability of 99.999%. A data specialist, VicTrack partners with customers that include Metro Trains, V/Line, Yarra Trams, other carriers, and various state and local government departments.

VicTrack is the custodial owner of Victoria's transport land, assets and infrastructure and works to protect and grow the value of the portfolio to support a thriving transport system, and make travel and living better for Victorians.

Built for transport. Ready for the future.

Infrastructure aligned to transport networks

VicTrack's fibre runs alongside the rail corridor across Victoria and extends beyond via our relationships with other telecommunications carriers—delivering connectivity where you need it.

Victorian Government-owned and operated

As a government-owned entity, VicTrack is committed to supporting public value. Our goals align with yours: delivering efficient, integrated, and safe transport for all Victorians.

Reliability and uptime you can count on

Public transport doesn't stop, and neither do we. Our carrier-grade infrastructure ensures low-latency, high-availability services designed to keep your operations online and uninterrupted.

Scalable and future-ready

From 5G support to smart mobility services and satellite, VicTrack's network infrastructure is future-proofed to meet the growing data demands of modern transport systems.

Seamless support for safety and operations

Our connectivity solutions underpin a wide range of transport-critical services, including telecommunications to support:

- driver, field and trackside communications
- passenger information systems
- real-time vehicle tracking
- CCTV and security monitoring
- signalling and control systems.
